

Chairman's Column

We closed out last year's program with the annual May Dinner meeting at Andrea's attended by a record crowd of 72 members and guests. Everyone seemed to enjoy the libations, excellent food and low volume, live dinner music.

The meeting schedule will resume on Tuesday, Sept. 17th, at the regular venue, i.e. Andrea's. Prof. Eric Smith, with the Tulane Energy Institute, will be our speaker. He has spoken to our group numerous times and his talks have always been interesting and informative.

SIPES National is currently putting together a photo directory and Eric B. will have his camera at the Sept. meeting for anyone who needs a picture.

On a sad note, Richard Seba, one of our longtime members, passed away on August 24, after a long fight with cancer. Richard was a "regular" at most meetings and his presence will be missed. Mark your calendars for the rest of this year; the meeting dates are;

September 17th October 15th November TBA December 17th

As usual, first half dues notices have gone out (both digital and hard copy).....last years' response was excellent...keep up the trend!

CHAIRMAN'S COMMENTS:

Over the summer, oil prices have moved up and down in a \$10/B range, currently seeming to find a home in the mid-fifties area. Natural Gas, however, has been a "bummer," settling in the \$2.20 range. South LA continues to suffer from a lack of activity, with the weekly scout report on SON-RIS down to about 10 pages.

In a couple of months we will have an election for governor (among others). I urge you to look carefully at the candidates. The incumbent has championed "frivolous" lawsuits against energy companies at the urging of his trial lawyer backers,,,, use your best judgment when you press the button!!

Prospects for Onshore & Offshore Production, Downstream Petrochemical & IMO 2020 market impacts & Offshore Guyana

Eric Smith

A.B. Freeman School of Business at Tulane University

Tuesday, September 17th Andrea's - Metairie Registration & Networking - 11:30 AM Lunch and Talk - Noon Reservations and guests: Carol St. Germain - 504-267-3466

Eric Smith is a Professor of Practice at the A.B. Freeman School of Business at Tulane University. He also serves as the Associate Director of the Tulane Energy Institute. In addition to teaching both undergraduate and graduate energy courses, he works with business and law professors on interdisciplinary projects and courses involving energy regulatory issues. He also works with the engineering and science school, engineering firms and with various regional teams focused on economic development.

He is a 1965 Chemical Engineering graduate of the Georgia Institute of Technology and earned an MBA, in 1967, from the A. B. Freeman School at Tulane University. In addition to fourteen years of full time academic/advisory experience, he has over thirty years of operational experience; first, in the downstream petrochemical industry and then, from 1984 until 2004, in the upstream drilling and construction sectors. During that time, he participated in arranging three IPOs, the largest being a combined primary-secondary offering for Saipem, SpA. He also was the head of Saipem's US subsidiary during the installation of Hoover-Diana, Exxon's first major deep water structure. *(Continued next page)*

Louis E. Lemarié

Eric has served as a consultant to Louisiana's Department of Economic Development as well as to Greater New Orleans, Inc. the regional economic development group. In addition, he is the Energy committee chairman of the World Trade Center of New Orleans. On occasion, he has also sup-

ported reverse trade missions involving energy options for Pakistan, South Africa, Nigeria and Ghana; all sponsored by the US Trade Development Agency. Most recently, he served as a consultant to the government of Guyana at the behest of the US Department of State. Finally, he acts as Tulane's media contact for energy issues.

He is author, or co-author, of reports on LNG, Natural Gas Liquids, changes in the onshore and offshore energy market, and Louisiana's relative competitiveness in industrial power generation, the use of petroleum coke as a fuel for the domestic power generation market. He has also authored a series of reports that deal with the economic impact of US shale oil and gas production on the Louisiana and Gulf Coast economies.

A significant current interest is the impact of burgeoning natural gas liquids production, a result of the shale oil and gas development, on the worldwide market for bulk plastics, primarily Polyethylene and PVC.
